

Instructions

In this experiment, you will interact with a group of **6 participants**. You will stay with this group throughout the experiment.

Each participant in the group is identified by one of 6 colours, as shown below. You will start with a randomly allocated colour, but you may be able to change it during the experiment.

Different participants identified by a coloured circle

Periods

The experiment has 20 periods. Each period has the following stages:

1. **Picking a colour.** Each group member's colour is shown on screen. 2 of the group members, chosen each round at random by the computer, are able to pick a new colour, which may or may not be the same as their old colour. The other 4 group members cannot change their colour.
2. **Picking a target.** See below.
3. **Results.** The computer displays which group members targeted whom, and each member's earnings from this period.

In each stage, you will have 60 seconds to make a decision. After that you will be prompted to move on.

After the 20 periods, you will be shown your earnings. **One** period will be chosen at random for payment. In addition to your earnings from this one period, you will receive a £2.50 showup fee. There will then be a short questionnaire. Finally, you will be paid privately and will be free to go.

Picking a target

All group members start each period with £12.00.

In the second stage of each period, you may **pick another group member as a target**. Picking a target costs £0.50. Alternatively, you may pick nobody, at no cost.

If you and at least 1 other person choose the same target, then **the target loses £10.00 and this is shared among all those who picked them**.

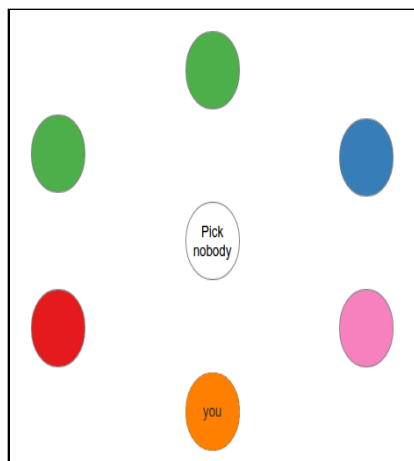

Example

If 3 people all choose the same group member as a target, then the target loses £10.00 and each of the 3 people gains £3.33.

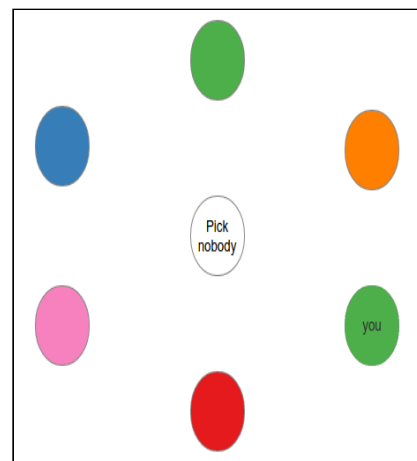

Picking group members

When you choose a target, group members will be shown on their screen, identified by their colour. Clicking on a group member will pick them as a target.

Other group members will see the same colours, but in a different order. See the two example screenshots below.

Group members are shown by colour. Click on a circle to pick that group member as a target.

Another group member sees the same colours, but in a different order.
